Award Winning

AxiomEHR Receives EHR Innovation Award!

The future for AxiomEHR is bright! Our new AI-powered EHR solution has been selected as winner of the **"EHR Innovation Award"** in the 8th annual MedTech Breakthrough Awards program, conducted by [MedTech Breakthrough](#).

The MedTech Breakthrough Awards recognize the innovation, hard work and success of companies, people, platforms and products in the health, fitness and medical technology industries. AxiomEHR was selected from thousands of nominations from over 18 countries throughout the world.

Tailored specifically for integrated health care providers, **AxiomEHR features advanced AI tools** to help you streamline inefficient workflows, reduce screen time, and optimize care delivery – and **saves clinicians two hours a day on average** compared to other solutions. AxiomEHR's unique architecture leverages natural language processing (NLP), machine learning, and generative AI to support data-based decision-making and flexible care coordination.

> "AxiomEHR eliminates some of the pain that plagues EHR users, while creating a new breed of EHR that's configurable. AxiomEHR is user-friendly and flexible, with AI capabilities that nearly eliminate administrative burdens so that clinicians can efficiently deliver compassionate care. We extend our sincere congratulations to the entire HiMS team on their well-deserved 2024 MedTech Breakthrough Award win."

Our award-winning AxiomEHR platform is a game-changer for integrated health care. See Why ➔

New Case Study

Service Access & Management Focuses on Data-Driven Decisions

Several of our customers have already tested AxiomEHR and experienced the benefits of its advanced AI-powered tools for voice recognition, note taking, decision making, and more.

Last year, **SAM implemented our Axiom software**, featuring dynamic form-building, intelligent automation, and robust reporting. The transformation significantly boosted case manager productivity, improved service quality, and enabled data-driven, value-based care for SAM's patients.

> "We can't overstate the difference between the old and new systems. Before, a lot of our judgements were made by necessity on a gut level. Now we can base decisions on data, refining our processes as we go to benefit every individual we serve."
>
> – Dylan Black, SAM onboarding, outreach and quality analyst

Healthcare Business Today

AI Promises New Levels of Organizational Sustainability

Amid increasingly challenging and competitive care environments, integrated health care providers are faced with how to better position their organizations for **operational excellence and long-term growth**. To ensure that every employee of an integrated health care organization performs at their highest potential, it's important to capture and synthesize the best, most accurate, and most timely data about clients, care, and finance to drive intelligent decisions and superior results.

In **Healthcare Business Today**, our CEO and Founder, Khalid Al-Maskari discusses how the right EHR can do just that – and how AI, automation, and continuous improvement from analytics and machine learning can drive organizational sustainability.

> "The ultimate information-sharing technology is AI. So far living up to the hype, it promises great power to foster new levels of effectiveness, quality, and sustainability for integrated health care organizations."
>

Carry the Mind-Body Connection through Your EHR Software

While it can be difficult for clinicians on the primary care and behavioral health sides of the house to coordinate care for chronically ill individuals receiving both kinds of treatment, we believe that **patient care should be just as integrated as patient health.**

We designed AxiomEHR specifically for integrated health care professionals. See the benefits of AxiomEHR ➔
